

Feature Description

Farmdeck's spraying conditions feature uses four factors to make spraying recommendations: Wind speed, likelihood of rain, Delta-T and thermal inversion.

These recommendations allow farmers to gain better visibility on the weather conditions affecting spray droplets, and reduce health and environmental impact.

Features

- Detailed information on paddocks sprayed, chemicals used, types of crops, types of weed or pests, nozzle name, type, speed and angle, name of person spraying
- Spraying recommendations
- Details on current environments
- Spraying forecasts

Applications

- Better visibility on weather conditions that affect spray droplets
- Reduction of health and environmental impact
